

AI Act readiness, *at a glance.*

Prepared for: an exam-prep edtech (illustrative example)
Prepared by: Ishimwe Etienne · EU AI Act compliance
Sample only. Your report uses your real systems.

Summary

Overall status: **AMBER, GAPS TO CLOSE**. We found three AI systems. One is **high risk** because it scores student work, and two need transparency fixes. None of the controls are in place yet, but all of it is fixable before the 2 August 2026 deadline.

1. AI inventory

SYSTEM	WHAT IT DOES	BUILT OR BOUGHT	DATA IT TOUCHES
Practice grader	Scores practice answers and essays	Built (fine-tuned model)	Student answers
Study-plan recommender	Suggests what to revise next	Built	Scores, usage
Support chatbot	Answers student questions in-app	Bought (vendor)	Chat messages

2. Risk classification

- Practice grader:** **HIGH RISK**. It evaluates learning outcomes (Annex III, point 3), so it needs human oversight, documentation, and accuracy checks.
- Study-plan recommender:** **LIMITED** today. Watch it if it starts deciding who gets access to what.
- Support chatbot:** **LIMITED**. Must clearly tell students they are talking to AI (Article 50).

3. Gaps to close

- The grader is high risk, with none of the required controls in place yet. This is the priority.
- The chatbot does not say it is AI. That is an Article 50 transparency gap.
- No staff AI literacy training yet. Required since February 2025 (Article 4).
- No written AI inventory or owner. This report is the first version.

4. Action plan

- 01 Put human oversight on the grader: a teacher can review and override its scores.
- 02 Document the grader: purpose, data, accuracy, and limits.
- 03 Add a short "you are chatting with AI" line to the chatbot. About one day of work.
- 04 Run a 60 to 90 minute AI literacy training for the team, with a certificate and records.
- 05 Re-check this list before 2 August 2026, and after any big AI change.
