

AI Act readiness, *at a glance.*

Prepared for: a wellness app (anonymised example)
Prepared by: Ishimwe Etienne · EU AI Act compliance
Sample only. Your report uses your real systems.

Summary

Overall status: **AMBER, GAPS TO CLOSE**. We found three AI systems in use. None are banned, two need transparency fixes, and the team has not done the required staff training yet. All of it is fixable well before the 2 August 2026 deadline.

1. AI inventory

SYSTEM	WHAT IT DOES	BUILT OR BOUGHT	DATA IT TOUCHES
Plan recommender	Suggests workouts and habits	Built (fine-tuned model)	Usage, preferences
Support chatbot	Answers user questions in-app	Bought (vendor)	Chat messages
Ad targeting	Finds new users	Bought (platform)	Behaviour signals

2. Risk classification

- Plan recommender:** **LIMITED** today. Becomes higher risk if it starts making health or medical decisions, so we flag it to watch.
- Support chatbot:** **LIMITED**. Must clearly tell users they are talking to AI (Article 50).
- Ad targeting:** **MINIMAL** under the Act, but check it never crosses into manipulation.

3. Gaps to close

- The chatbot does not say it is AI. That is an Article 50 transparency gap.
- No staff AI literacy training yet. Required since February 2025 (Article 4).
- No written AI inventory or owner. This report is the first version.
- No human oversight note for the recommender.

4. Action plan

- 01 Add a short "you are chatting with AI" line to the chatbot. About one day of work.
- 02 Run a 60 to 90 minute AI literacy training for the team, with a certificate and records.
- 03 Document the plan recommender: purpose, data, and who owns it.
- 04 Name one person responsible for human oversight of AI decisions.
- 05 Re-check this list before 2 August 2026, and after any big AI change.
